

Daniele Basso, CEO

“HBI wants to promote innovative technologies, for the implementation of sustainability and circular economy to preserve natural systems, improve human wellbeing and social equity”

Renato Pavanetto, COO

“We want to use our knowledge synergetically, create that bridge between university research and the Made in Italy entrepreneurship, because we believe that this is the key to position Italy back to an international leadership position and excellence”

About us

Company profile

We develop and commercialise innovative systems for the recovery of high added value materials and clean energy from wastewater sludge.

happen*

PNRR

Offered activities within the partnership

- Technological scouting
- Collection and review of documents for the application
- Project drafting support
- Management of the preliminary examination stages
- Project management and reporting

In collaboration with:

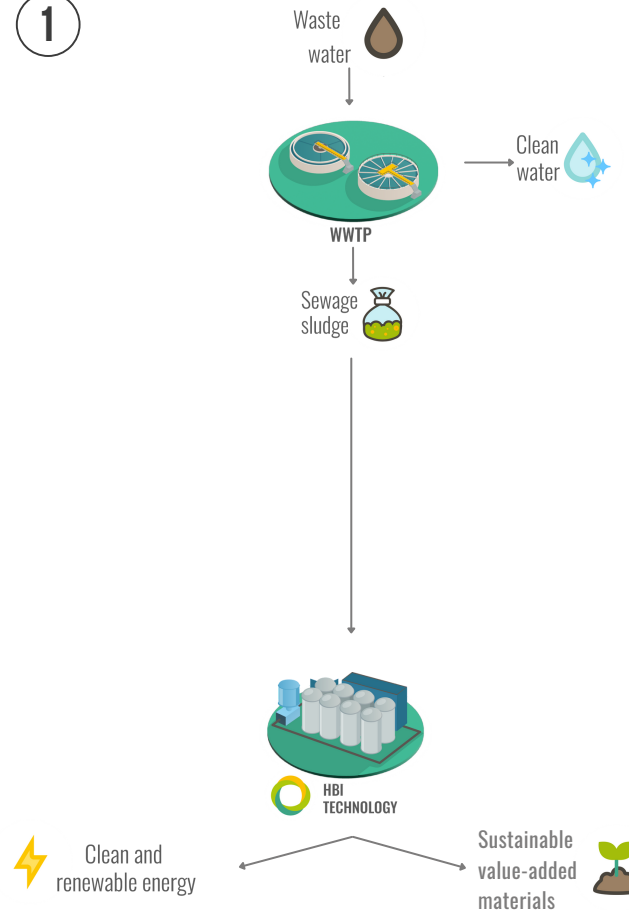

Certificates:

Technology

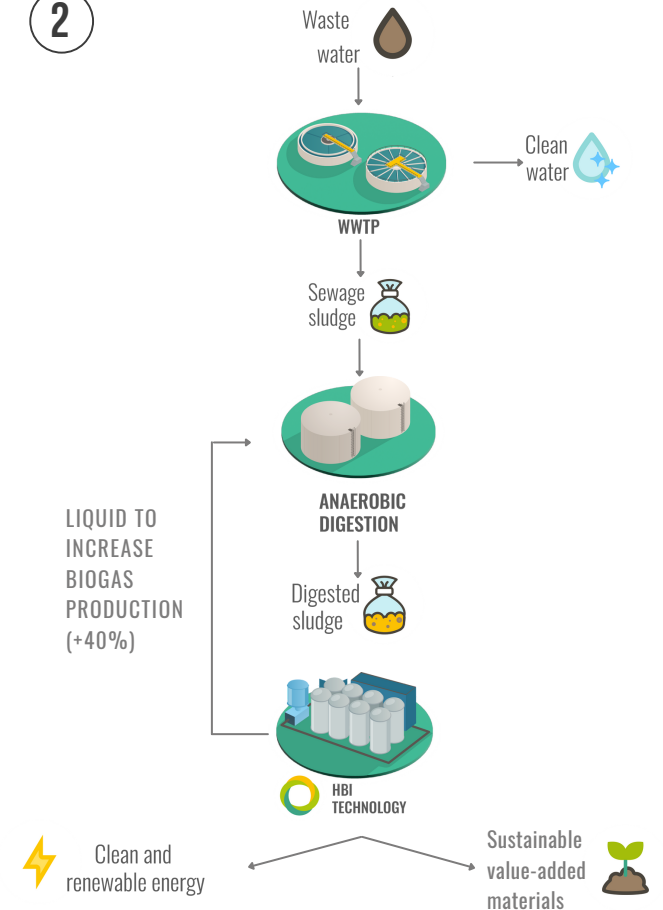

1

ADVANTAGES

- Final waste reduced by 90 %;
- 85 % reused water;
- Sustainable production of ammonia and nutrients;
- No gaseous and odorous emissions;
- Energy self-sufficient;
- Extremely compact.

2

ADVANTAGES

- Increase of biogas in anaerobic digestors by 40%;
- Lower transport and disposal costs;
- Increased economic efficiency;
- No gaseous and odorous emissions;
- Energetically self-sufficient;
- Extremely compact.
